

The First SmartMS-Enabled Biopharma Solution

EASY TO DEPLOY | HIGH-QUALITY DATA | COMPLIANCE-READY | STREAMLINED ATTRIBUTE ANALYSIS

Simplifying high performance LC-MS analysis for every user.

SIMPLE SET-UP FOR BENCH SCIENTISTS

Reduce training, save time, and ensure consistently reproducible results to eliminate bottlenecks and speed up decision-making. The BioAccord™ System with SmartMS™ provides a unique user experience through simple, consistent, automated setup for bench scientists.

CONFIDENCE IN CONSISTENT AND QUALITY DATA

Efficient accurate mass monitoring of key/critical quality attributes at the protein, peptide, released glycan, and oligonucleotide level across all phases of drug development. The BioAccord System is optimized for unparalleled robustness and reproducibility for each application, for confidence in consistent results day in and day out.

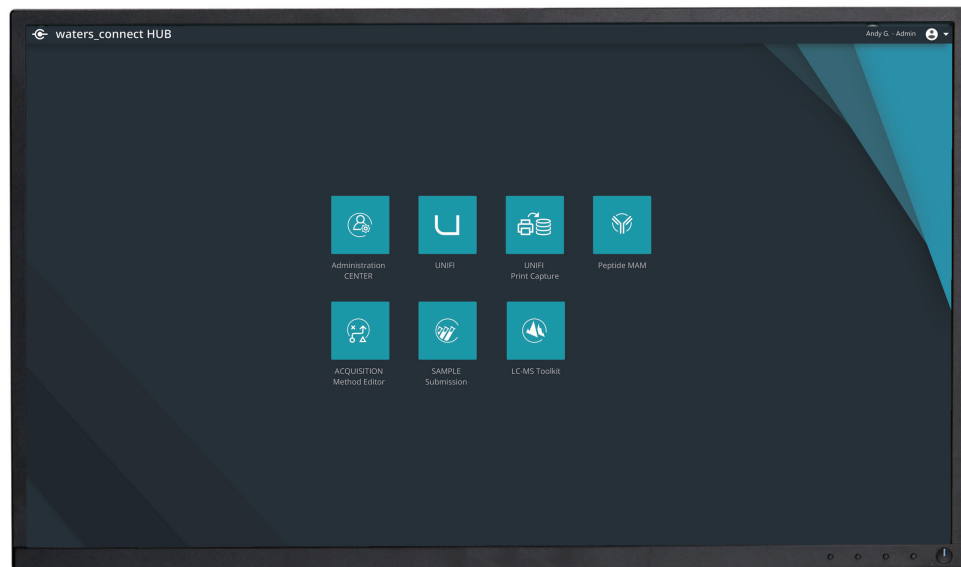

ENSURE CONFIDENCE IN RESULTS

Whether your applications involve analyzing the biomolecules at the intact, subunit, peptide, released glycan, or oligonucleotide level, consumables (columns, performance standards, reagents, and vials) specific for each application are included to ensure confidence and high-quality results.

COMPLIANCE-READY STREAMLINED WORKFLOWS

- One software platform with a single, complete audit trail for acquisition, processing, and reporting of your data, reduces risk and simplifies audit preparation.
- Automated start-up and optimization, intelligent diagnostics, and intuitive software make access to high performance mass analysis easier than ever before.
- Transform your data into meaningful information and increase your opportunity to be first to market.

waters_connect delivers LC-MS applications that accelerate end-to-end scientific workflows in a compliant-ready platform.

CONSISTENT, PRODUCTIVE, CONFIDENT

Transfer methods and molecules with confidence and get the reproducibility you need day-to-day system-to-system throughout your organization. All this with a surprisingly small footprint means you'll be using up less bench space than you imagined.

ROBUSTNESS AND RELIABILITY, ENSURED

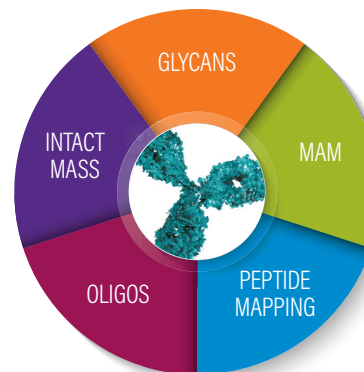

All LC, MS, PC, and Informatics components will be configured, shipped, and installed as a complete system. This ensures the system is installed and ready to use quickly and assures system robustness to boost productivity in routine operation.

EASY TO DEPLOY, OPERATE, AND MAINTAIN

Our team of experts will work with you to ensure your biopharmaceutical application and reporting success. This includes our application-centric service, training, and support.

MAXIMIZE PRODUCTIVITY

Unexpected downtime can have a significant impact on productivity and profitability. Maximize uptime with the BioAccord System by identifying and resolving issues quickly. Intuitive software and SmartMS automatically optimizes, detects faults, and provides guidance on how to resolve them.

The BioAccord LC-MS System has application-tailored workflows to efficiently convert samples into results.

SelectScience Product Reviews:

"This is a must-have for any lab. It streamlined department testing. Sample turn around time has decreased substantially. Great product!"

"Extremely robust and easy to use, the BioAccord provides a reliable platform for routine analysis of biopharmaceuticals, whilst at the same time ensuring data integrity and providing seamless automated workflows to maximize throughput"

"The equipment greatly enhanced my department's ability to analyze samples and increased throughput."
