

Ekologický význam řasových nárostů v postěžebních jezerech: Koloběh fosforu a primární produkce bentických řas

Klára Řeháková, Kateřina Čapková

microalgae

2 m

Chara sp.

10 - 15 m

Vaucheria sp.

periphyton (epilithon)

macroalgal mats

microalgae

Diversity

Primary production year around

Phosphorus uptake

i) spatial variability along the depth gradient

ii) temporal variability throughout the seasons

2 m

Chara sp.

10 - 15 m

Vaucheria sp.

periphyton (epilithon)

macroalgal mats

Mikrobiální nárosty

Chary, Vaucherie

Litorální zóna (ha)

Sezónní vývoj biomasy perifytonu (mikrobiální nárůst)

jaro

Vývoj biomasy vyšších rostlin a makrořas - Milada

Diversita

- víc jak 400 druhů, rozsivky převažují
- diversita ovlivněna hloubkou, sezónou, stářím jezera, výsledkem je rozložení řas podél hloubkového gradientu a změna se stářím jezera

Příjem fosforu –kinetika isotopu ^{33}P

Konopáčová et al. 2021

Low Specific Phosphorus Uptake Affinity of Epilithon in Three Oligo- to Mesotrophic Post-mining Lakes

Primární produkce perifytonu a makrořas

Čapková et al 2023

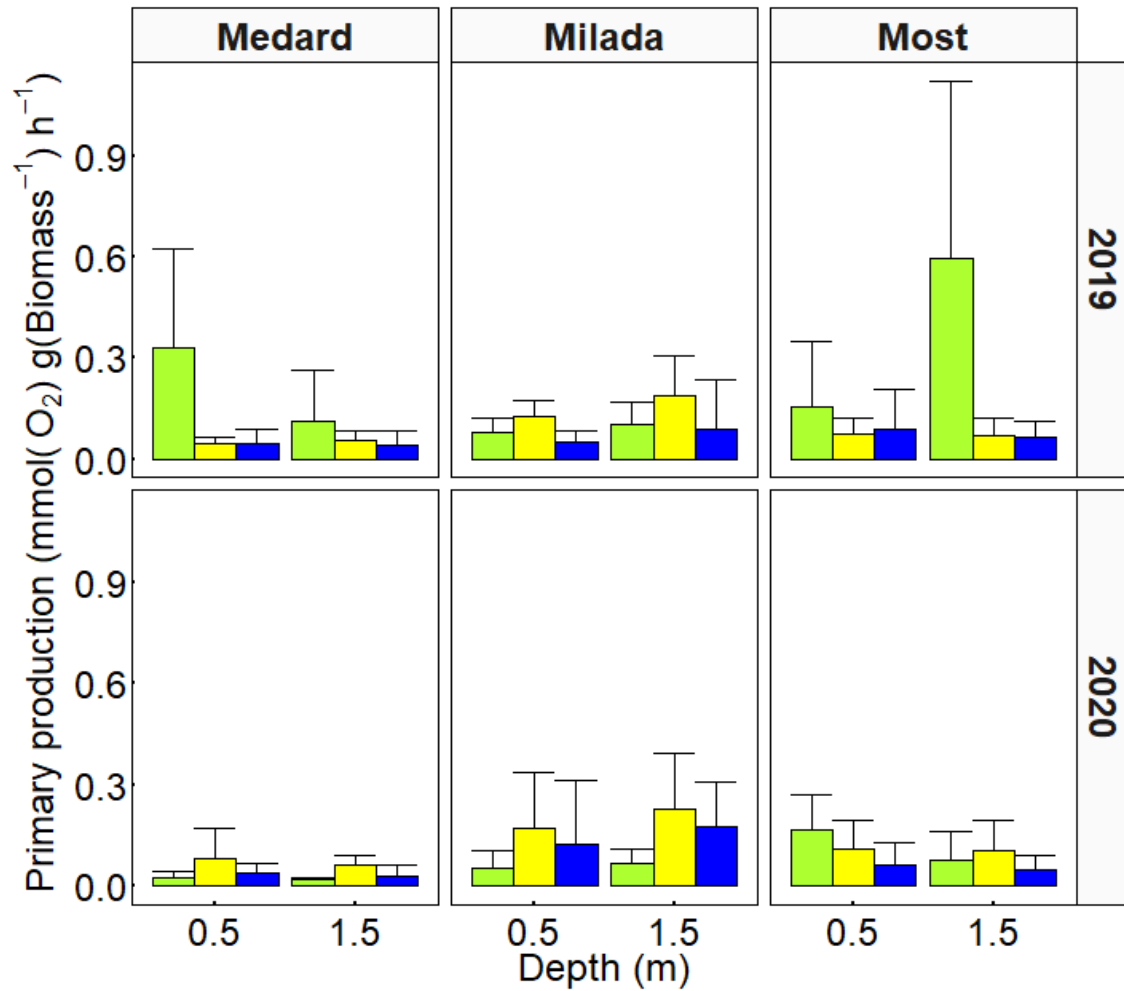

Primary productivity of benthic algae

Vaucheria – most active in winter

Primary productivity of benthic algae

Vaucheria – most active in winter

Vaucheria
winter primary producer hero

Komplexní průzkumy:

- **kvantitativní data** – hydroakustika
- **kvalitativní data** - tenatové sítě (ze všech habitatů jezera), druhové složení, abundance, biomasa, věkové složení, potrava, paraziti, chování...
- Milada 2005-2022 (x2011, 2016, 2018, 2019, 2021, 2024)
- Most od 2009-2022 (x2019, 2021, 2024)
- Medard 2009-2024

Rybí společenstva důlních jezer:

MILADA

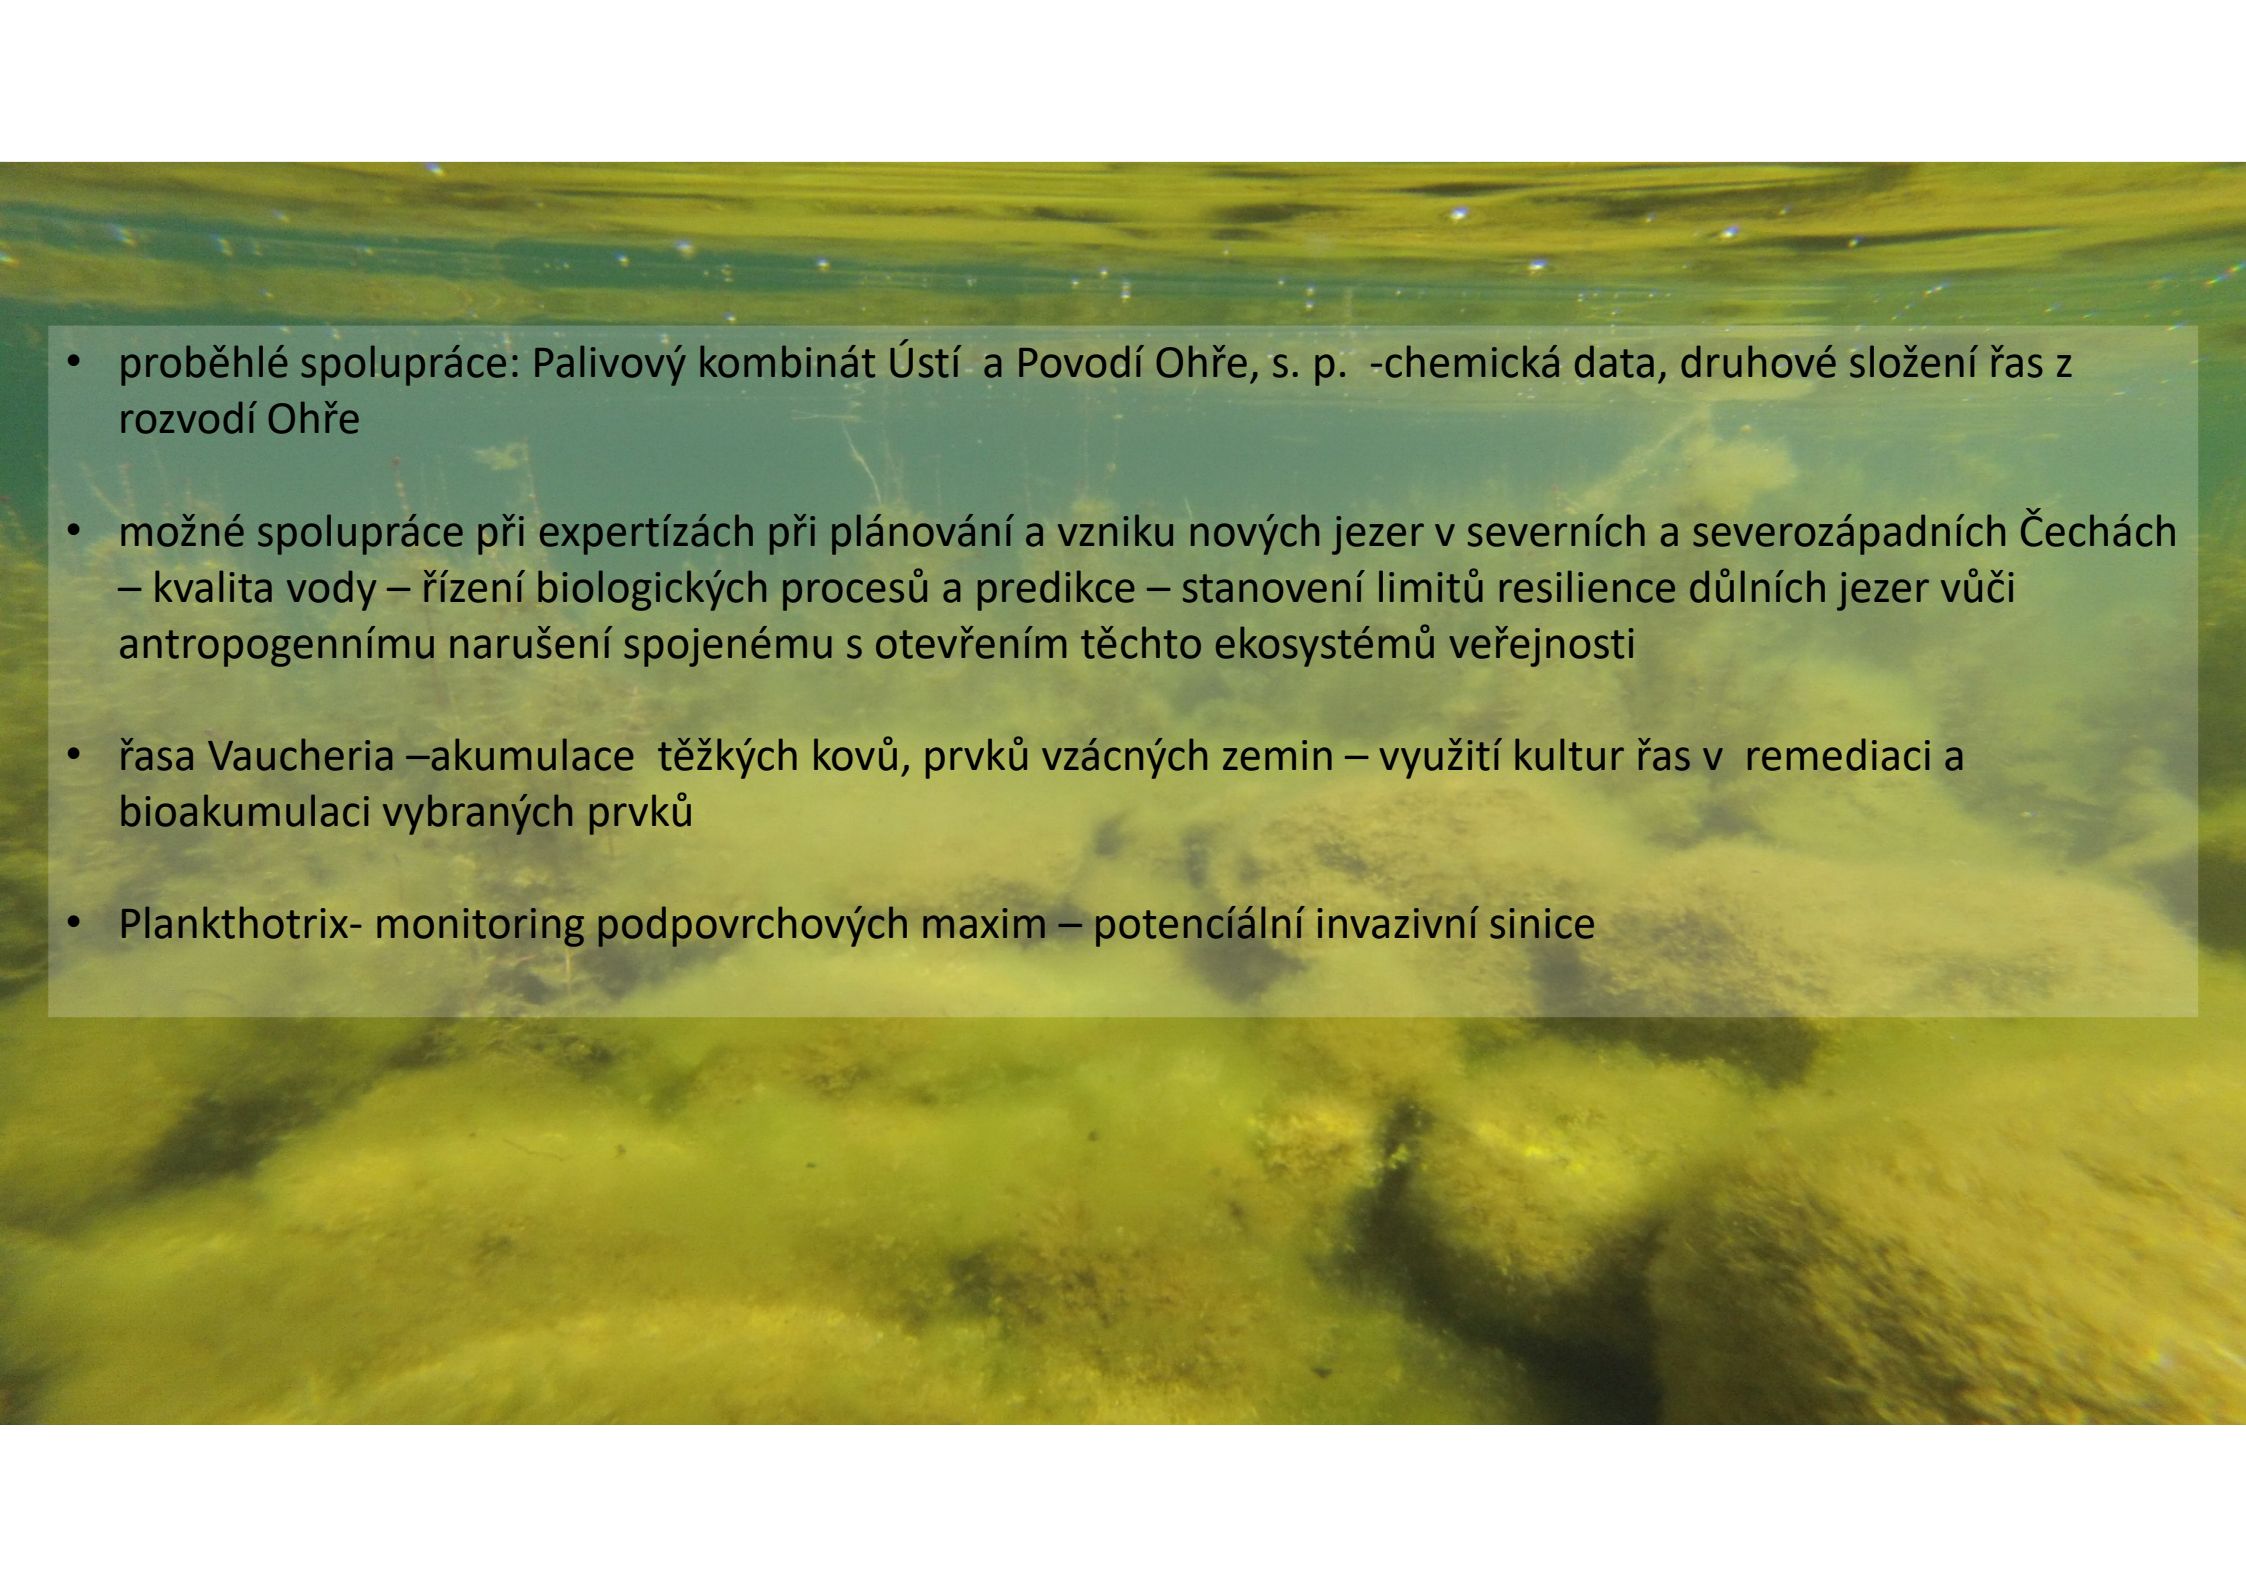

MOST

MEDARD

- 
- proběhlé spolupráce: Palivový kombinát Ústí a Povodí Ohře, s. p. -chemická data, druhové složení řas z rozvodí Ohře
 - možné spolupráce při expertízách při plánování a vzniku nových jezer v severních a severozápadních Čechách – kvalita vody – řízení biologických procesů a predikce – stanovení limitů resilience důlních jezer vůči antropogennímu narušení spojenému s otevřením těchto ekosystémů veřejnosti
 - řasa Vaucheria –akumulace těžkých kovů, prvků vzácných zemin – využití kultur řas v remediaci a bioakumulaci vybraných prvků
 - Plankthotrix- monitoring podpovrchových maxim – potenciální invazivní sinice
