The CDS Model 7400 autosampler, combined with a Model 7000 Purge & Trap, constitutes an autosampling system capable of handling up to 72 water or soil samples, using standard 40 ml vials. In the water analysis mode, samples are transferred from a 40 ml vial to a 5 or 25 ml sparging vessel of the 7000, then purged to the trap. The 7400 automatically adds the internal standard solution and may be programmed to perform replicate analyses, blanks and rinses between runs.

Figure 1 shows an analysis of water containing volatile organics at the 40 PPB level, plus internal standards. The sample amount was 5 ml, purged with helium for 11 minutes at 35 ml/min. The chromatography was programmed to permit detection of the compounds, from Dichlorodifluoromethane to Trichlorobenzene, in less than 22 minutes.

Instrument Conditions

CDS 7000E Purge & Trap

Valve Oven:	130°C
Transfer Line:	130°C
Purge Time:	11 minutes
Dry Purge:	2 minutes
Desorb Preheat:	240°C
Trap Desorb:	250°C 2 minutes
Trap Bake:	260°C 10 minutes
Trap:	Vocarb 3000
