SIGMA-ALDRICH

Vials, Caps, Septa and Vial Accessories

Choose Sigma-Aldrich Products for Consistent Results in Your Chromatographic Applications

Too easily overlooked, the vials, caps and septa that come in contact with the sample are a critical component of a successful analysis. *Structurally*, they must ensure a tight and secure fit in the analytical instrument. *Compositionally*, they must be able to withstand chemical and mechanical forces within a defined range. *Chemically*, they must be inert and not introduce extraneous compounds into the sample that can interfere with the analysis.

Our experts within the diverse analytical disciplines have chosen the best vials, caps, septa and accessories that meet the demands of today's instruments, samples and measurement techniques. We offer products that fit autosamplers from all major instrument manufacturers, and that have the cleanliness, quality and reproducibility to guarantee a successful analysis. Not stagnant, our line of vials, caps and septa is expanding to keep pace with new analytical instrumentation and metrological challenges. As with all of our products, they are backed by Sigma-Aldrich's commitment to innovation, quality and service.

Customization: An Example of Sigma-Aldrich's Dedication to Complete Customer Satisfaction

Custom Vials and Accessories

If you cannot find the vials, cap, septa or other vial accessory you need in this catalog, on our website or by speaking with one of our technical service representatives, we would be happy to try to find the right product for you. Custom orders follow the same prompt delivery and competitive pricing as our stocked products.

Custom Deactivation

The adsorptive character of glass surfaces can lead to low analyte recovery, especially with polar compounds. Silanization – a reaction between surface silanols and special reagents – is an effective technique to deactivate glass surfaces to prevent adsorption. We offer a range of pre-silanized glassware, and can silanize other glass products to meet your criteria and sensitivity demands.

Contract Pricing

Routine analysis can consume large quantities of vials, caps and septa. To help you keep your costs down, we offer special pricing for large orders. Please contact our customer service department for a quotation.

Accelerating Our Customers' Success through Leadership in Life Science, High Technology and Service

Vials, Caps and Septa

General Information

Autosampler vials are classified by the diameter of the body of the vial, the height of the vial, and, the thread finish. Vial volumes are nominal. For example, various manufacturers describe a 12mm x 32mm vial as having a volume of 1.5 mL, 1.8 mL, or 2 mL. Clear glass and amber glass offer essentially the same inertness. Amber glass protects sensitive samples from exposure to UV light. The marking spot available on many vials provides a convenient place for sample identification information.

Vials

The wide variety of analytical instruments available requires a wide variety of sample vials. The most commonly used types are pictured below.

Universal 9mm Vial

The universal or 9mm vials were designed for use in autosamplers with robotic arms. There is a gap between the bottom of the cap and the shoulder of the vial that allows the robotic arm to grab the vial. Both 9mm screw caps and crimp seal caps can be used to close these vials. They are available in clear and amber glass, with or without marking spots.

Screw Thread Vials

Screw thread vials are used on many autosamplers. These vials are now available in the standard opening version (4.6mm) or the larger opening style (6.0mm).

The larger opening vial was created to prevent needle damage. The threads on the standard vials are much longer than the new universal

vial. The results are that the bottom of the cap will rest on the shoulder of the vial and can not be used with robotic systems. The thread on the standard opening vial is 8-425 and the thread on the larger opening vial is 10-425. The caps on both of these products are unique and are not interchangeable.

Crimp Top Vials

Crimp top vials provide the best seal of any vials. Crimp top vials also have a large opening finish (6.0mm) and are available in both clear and amber glass, with and without marking spots on the vial.

Snap Top Vials

These vials are ideal for high throughput analyses. The polyethylene caps used with snap top vials offer a positive seal, yet are quickly and easily attached and removed without the use of crimping or decapping tools. They are available in clear glass and amber glass, with or without marking spots. Snap top vials should not be used for long term storage.

Vial Finish

There are many designs in vials in both the top finish and the bottom finish. The information below will help you to determine which vial to purchase.

Design of Neck:

Design of Bottom:

Crimp Caps

Crimp caps are available in the four styles shown below. They are also available open center aluminum and open center magnetic with various septa.

Screw Caps

Screw caps are available as hole caps for use with sealing septa and solid caps with aluminum or PTFE liners. Caps are offered in polypropylene or phenolic resin. Polypropylene caps have a maximum temperature of 135° C while phenolic hole caps have a maximum temperature of 149° C and solid phenolic caps have a maximum temperature of 205° C.

Cap Thread Specifications

Thread Specifications

"T" = Outer diameter of the thread
"H" = Distance from top of finish to shoulder for closure clearance

Standard Screw Thread Finish

"T" = Outer diameter of cap
"H" = Distance from top to shoulder for crimp and robotic arm clearance

GPI Thread Finish

The "Glass Packaging Institute" is responsible for establishing and issuing standards in the glass industry. When a cap is designed as 8-425, it means that the diameter across the threaded area is approximately 8 millimeters. The number 425 designates a specific height of the cap. The table below shows the dimensions.

"T" Dimension in mm	"H" Dimension in mm	
	400	425
8		6.52
10		6.86
13		7.50
15		7.50
18	9.05	
20	9.50	
22	9.50	
24	10.25	

Septa

Vial septa are available in a variety of materials. Septa are selected based on the chemical properties of the sample and the temperature to which the vial will be subjected during the analysis. Several septa are available with either slits or a starburst pattern pre-cut into them. These cuts provide a secure seal, but allow easy penetration by the autosampler needle. The various types of septa, their properties and incompatibilities are listed in the table below.

Septa Selection Guide

Septa	Use with	Avoid	Resealability	Temperature Limit
Barrier (aluminum faced silicone)	Non-permeability and low volatility applications	Acetonitrile, benzene, chloroform, hexane, pyridine, THF, toluene	Good	350°C
Butyl	Acetic acid (<50%), acetonitrile, acetone, alcohols, DMSO, phenol	Alkanes, benzene, carbon disulfide, chlorinated solvents, cyclohexane	Excellent	200°C
Red Rubber	Acetonitrile, alcohols, cyclohexane, many hydrocarbons	Chlorinated solvents	Good	100°C
Silicone	Acetone, alcohols, DMSO, ether, aqueous samples	Acetonitrile, benzene, chloroform, hexane, pyridine, THF	Good	250°C
PTFE/Rubber	Most organic solvents until PTFE is pierced then septa will have the rubber compatibility	Aromatics, carbon disulfides, chlorinated solvents, hydrocarbons	Good	100°C
PTFE/Silicone	Most organic solvents until PTFE is pierced then septa will have the silicone compatibility	Chlorosilanes	Good	250°C
PTFE/Thermoseal (High temperature)	Acetone, alcohols, DMSO, ether, aqueous samples	Acetonitrile, benzene, chloroform, hexane, pyridine, THF	Good	300°C
Viton	Aliphatic and aromatic hydrocarbons, high concentrations of acids, mineral oil	Strong bases, ketones, low molecular weight esters	Good	260°C

Inserts

Vial inserts allow the use of smaller sample volumes with standard autosampler vials. Inserts are available in various styles including: conical, with bottom spring, with top spring and shell style or flat bottom. Inserts should be chosen based on the inner diameter of the vial neck. Standard opening vials (4.6 mm ID) require a 5 mm OD insert while large opening vials (6.0 mm ID) require a 6 mm OD insert. Step vials are recommended when choosing conical inserts.

SPME Vials

SPME methods have traditionally been done using crimp top vials. We have recently introduced a new line of screw cap vials that are a good alternative to crimp top vials for SPME. These vials have stainless steel screw caps and use the soft, thin septa recommended for SPME. We also offer crimp top vials with a thicker sealing lip to accommodate the use of thinner (1.3 to 1.6 mm thick) septa recommended for SPME.

Many researchers use the CombiPAL™ robotic autosampler for SPME work. These autosamplers use a magnetic system to pick up vials. Therefore, the vials used in this system must have magnetic caps. The conical vials with 3 mm septa that are commonly used for headspace analysis with the CombiPAL should not be used for SPME. Conversely, use of thin septa with the conical vials is not recommended to prevent leaking.

Silanization of Glass Vials

High concentrations of silanol groups (Si-O-H) on untreated glass vial surfaces can catalyze decomposition of unstable compounds or adsorb polar compounds through hydrogen bonding. Quantitative analyses of these sensitive compounds become unreliable, recoveries are reduced and analyses can be complicated by decomposition byproducts.

We use an environmentally friendly process to silanize glass vials. It does not use solvents for diluting the reagents or rinsing the deactivated glass vials and employs an elaborate trapping system to confine reagent vapors. The organosilanization

process derivatizes surface silanols at a high temperature, shielding the active groups from contact with the active hydrogens on the sample components.

Several popular vials are offered pre-silanized. However, most vials can be silanized on a custom basis. Please inquire with our Technical Service Group for details.

Vials

Pre-cleaned Vials

We offer several of the most popular vials and closures pre-cleaned for environmental sampling. The vials, caps, and septa are washed in a laboratory grade non-phosphate detergent. They are rinsed three times with deionized water and oven dried. A Certificate of Analysis is supplied with each package and labels are provided for each vial. These vials come pre-assembled with open top phenolic caps and PTFE/silicone septa.

The following vials are cleaned according to US EPA 40 CFR 136, Guidelines for Establishing Test Procedures for the Analysis of Pollutants.

Pre-cleaned Vials

Vial Racks

Glass Magnet Products

Our glass magnet sheet prevents your glass apparatus from being knocked over accidentally. This 2' x 2' sheet (61 cm x 61 cm), with its tacky surface, effectively secures the vessels in place. It can be cut with a razor blade or utility knife to fit strategically on counter tops or in drawers containing fragile glassware. Add it to carts when transporting glass to another lab or into the field.

The glass magnet vial holder keeps individual vials, ampuls, and other vessels in place.

Space Saver Stack Racks

Economical and convenient storage for samples in your screw cap and crimp cap vials. Can be stacked when empty or full. Autoclavable, 120°C. Each case contains 5 racks.

Crimpers/Decappers

The Supelco hand held crimper provides a consistent and dependable seal that allows secure vial closure each and every time. The high quality construction is engineered for durability and long life to provide a smooth and simple operation. The adjustable stop accommodates a wide range of cap and septa thickness.

- High quality construction for durability and long life
- Consistent, dependable performance
- Smooth, simple operation
- Painted, plated or coated for maximum corrosion resistance
- Less expensive than competitive models

Crimpers and decappers

Description	Pack Size	Prod. No.
8mm		
Hand crimper 8.0mm	1	33272-U
Decapper, pliers-type, 8.0mm cap	1	33284
Decapper for 8.0mm caps	1	33180-U
11mm		
Hand crimper, 1.0mL, 11mm cap	1	33195
Adjustable hand crimper, 1mL, 11mm cap	1	22313-U
Decapper 11mm cap	1	33281
Decapper for 11mm caps	1	33181-U

Hand crimper, 2.0mL, 13mm cap	1	33279-U
Decapper 13mm cap	1	33282
Decapper for 13mm cap	1	33182-U
20mm		
Hand crimper, 5-100mL, 20mm cap	1	33280-U
Adjustable hand crimper, 5-100mL, 20mm cap	1	22316-U
Decapper 20mm cap	1	33283
Decapper for 20mm caps	1	33183

An inappropriate crimp can be recognized by:

	Undercrimped	Overcrimped	Overcrimped	Overcrimped	Overcrimped
Correct Crimp Flat cap surface Flat septa surface 					
Appearance	Loose aluminium edge	Upward bulge of the crimp cap	Deformation of the crimp cap sides	Convex looking liner	Rounded edges/upward bulge of the cap/liner
Solutions	Adjust crimping pressure with the screw in the handle + Adjust crimping height with the hexagon key	Adjust crimping pressure with the screw in the handle + Adjust crimping height with the hexagon key	Adjust crimping height with the hexagon key	Adjust crimping pressure with the screw in the handle	Especially with headspace caps it is important not to overcrimp them. If the aluminium is stretched too much under the crimp neck, the bridges of the scorelines suffer too much stress and can break open at even low pressure (below 3 bars) or - in worst case - can even tear apart beside the scorelines

The Service You Deserve...

Easy Ordering

Supelco offers many ways to easily place your order or inquire about an existing order. You can call, fax, or visit our web site 24 hours a day, 7 days a week.

Please contact us at

USA and Canada:

Phone: 800-247-6628 / 800-325-3010 / 814-359-3441

Fax: 800-325-5052 / 814-359-5459

Web: sigma-aldrich.com/supelco

Europe: Please see back cover for contact details

International: Please see back cover for details

For more information, visit www.sigma-aldrich.com

Ready to order products? Searching for Material Safety Data Sheets or other product information? Need a new catalog? Many of your questions can be answered at our web site. Go to www.sigma-aldrich.com/supelco to search for products, check up-to-the-minute availability, place orders, check order status, or directly trace your order with a tracking number that is hot linked to the carrier's web site. You can check the status and trace an order in two clicks!

On-Time Delivery

Still waiting for HPLC or capillary GC columns that you ordered last week or last month? Not getting responsive customer service? Get the service you deserve today with products that meet your performance demands and are delivered when you need them.

Superior Support

When you want additional information about a product, or help with a problem, our knowledgeable Technical Service chemists and our extensive library of free technical literature are just a telephone call, fax message, or email away. We are always ready to respond to your questions, suggestions, criticisms, and changing needs.

In the USA and Canada, please contact us at the following telephone numbers Monday - Friday during the hours of 8AM - 8PM Eastern Time

USA and Canada:

Phone: 800-359-3041 / 814-359-3041

Fax: 800-359-3044 / 814-359-5468

Email: techservice@sial.com
